Turning Your Cloud's SILVER LINING INTO GOLD

Everyone is in the cloud for something...

Public Cloud Users are Confused About Who Owns Their Cloud Security

Over half of organizations (mistakenly) think their cloud provider owns all or the majority of the responsibility for their data security

Only 15% of organizations believe they are wholly or primarily responsible for their public cloud data security

21% of organizations (mistakenly) believe they equally share responsibility for their cloud data security with their cloud provider

Only 40% of organizations are highly confident they could prevent loss or leakage of sensitive cloud data

Public Clouds are not Secure by Default

Half of healthcare and medical organizations have as many as 50% of their applications in the cloud

Nearly all organizations report having IT or security workloads in the cloud

Only 25% of manufacturing organizations engage their security teams in a leading role in public cloud initiatives

Nearly half of organizations believe they have data leakage due to unauthorized access occurring often to very often

Top Challenges for Cloud Security

Lack of security visibility within the cloud infrastructure due to provider limitations

of Enterprises

86% Banking/Insurance

of Finance/

Lack of security visibility within the cloud infrastructure due to tool limitations

63% of MSSPs

of Healthcare/ 43% Medical/Pharma

Lack of centralized controls for distributed cloud providers

75% of Manufacturing

of Infrastructure/ 44% **Utilities/Shipping**

Cloud Users Must Take Ownership of **Protecting Their Cloud Data!**

79% of organizations admit they need to invest in stronger security controls for cloud data

35% of organizations have funded a project to invest in stronger controls
